Cube

※Slow-melting cubes keep drinks colder longer-perfect for whiskey, cocktails, and more.

※Melts evenly, maintaining balanced cooling without over-chilling or watering down your drink too quickly.

※Popular for restaurants, bars, hotels, medical cold therapy, and keep food fresh.

Nugget

※The porous structure provides a larger contact area, enabling rapid penetration into every corner of the beverage for uniform cooling.

※Slow-melting for sustained release of pure ice taste, preventing dilution and preserving the drink's perfect flavor balance.

Spray-type

□ Solid hard ice with intact shape, distinct granules, high transparency, excellent visual effect and low core temperature.

※Evaporator temperature: -25°C, core freezing point: -17°C. It is not easy to melt, larger and heavier than common ice cubes on the market.

※Good thermal insulation and cooling effect, keeping drinks tasting better for a long time.
